INTERREG Polder2C's project

The INTERREG Polder2C's is an international research project within the framework of the updated Sigrmaplan for the river Schelde. The Hedwige-Prosperpolder will be transformed into tidal nature. Depoldering of Hedwige-Prosperpolder offers a unique testing ground, the Living Lab Hedwige-Prosperpolder, for flood defence and emergency response experts. In this environment current and innovative techniques, processes, methods and products can be tested for practical validation. Thirteen project partners, led by the Dutch Foundation of Applied Water Research (STOWA) and the Flemish Department of Mobility and Public Works (DMOW, Flanders Hydraulics Research), are working together. Together, they aim to improve the 2 Seas regions' capacity to adapt to the challenges caused by climate change.

Flood Defence

The rising sea level is a serious threat to the countries in 2 Seas region. How strong are our current flood defences? What is the impact of environmental elements such as the weather, the presence of vegetation or man-made objects on our flood defences? To answer these questions numerous destructive field tests are carried out in the Living Lab to validate flood defence practices. The project entails in situ testing, guidance on levee maintenance and validation of flood defence infrastructure.

Emergency Response

We aim to improve emergency response by developing the right tools for inspection of water defences, risk evaluation and solutions for flooding. If our water defences do not operate as designed, we must take the right measures to prevent flooding of valuable areas. The Hedwige-Prosperpolder Living Lab offers unique possibilities to exercise emergency management in the event of calamities under controlled but realistic circumstances. Activities that are part of the programme are levee surveillance and monitoring, emergency response exercises, breach initiation and the large European exercise.

Knowledge Infrastructure

We aim to develop a knowledge infrastructure through which existing and new to be developed knowledge will become available and accessible. A necessary success factor for any initiative to improve knowledge is to have its outcomes integrated in practices of a wider community. Knowledge Infrastructure focuses therefore on the consolidation of knowledge acquired in the Living Lab with a variety of activities. Accessibility of data in a user-friendly manner, educational activities in the field and incorporation of knowledge in educational curricula are considered key elements.

Field Station

How can we make sure that both experts in the field and the local public benefit from our project and the learnings about climate change, flood resilience, emergency response and the unique environment of the Hedwige-Prosperpolder? An important and unique way of reaching this goal is realising a Field Station at the project site. It will be used during and after the project for educational purposes, research and as a special meeting place for exclusive occasions.

1 Introduction

Overflow tests on levees are designed to test the strength of levees and levee covers under the load of a continuously overflowing discharge of water. For this purpose, Flanders Hydraulics Research have designed and built an Overflow Generator (Vercruyse et al., 2022) within the framework of the Polder2C's project. This device allows to generate a controlled and homogenous discharge of water over the levee crest.

Within the Polder2C's project, 25 overflow tests on Belgian and Dutch levee stretches have been executed in 3 episodes from 30/10/20 to 28/11/20, 17/02/21 to 31/03/21 and 16/11/21 to 20/12/21. Different test goals have been addressed, to understand the normal performance of a levee cover, and the influence of different anomalies and/or deviations from the 'standard' levee.

This report bundles the **annexes** for the data report of the overflow tests executed on the Belgian part of the Hedwige-Propserpolder levees. The information shown herein pertains to the tests indicated by the striped box:

Name	Category
- B-OF01 Reference	Reference
- B-OF02 Short Grass + Artif. Anom	Alternative vegetation + Slope anomaly
- B-OF03 High Discharge	High Discharge
- B-OF04 Tree	Tree
- B-OF05 Erosion cliff	Slope anomaly
- B-OF05B Damage repair	Damage repair
- B-OF06 Clay Erosion	Clay Erosion
- B-OF07 Levee Challenge	Damage repair
- B-OF08 Reference	Reference
- B-OF09 High Discharge	High Discharge
- B-OF10 High Discharge	High Discharge
- B-OF11 Tree	Tree
- N-OF01 Reference	Reference
- N-OF02 Clay Erosion	Clay Erosion
- N-OF03 Reference	Reference
- N-OF04 Reference	Reference
- N-OF05 Burrow	Burrow
- N-OF05B Damage repair	Damage repair
- N-OF05C RTM	RTM

H.3 N-OF09 Block 3 bis

Start	26/11/2021 11:44				
Stop	26/11/2021 12:44				
Duration	1 hour				
Pump and pump power	BA500				
Discharge	9.0 m ³ /min				
Notes	See notes block 1				
Statistics	Statistics calculated from 222 until 3657 s (n=34342).				
series	Min	max	mean	std	Unit
DISCHARGE					m ³ /s
WH_CREST	0,047	0,068	0,055	0,003	m
WH_UPPER	0,045	0,066	0,054	0,003	m

VXY_MOBILE					m/s
VXY_LOWER					m/s

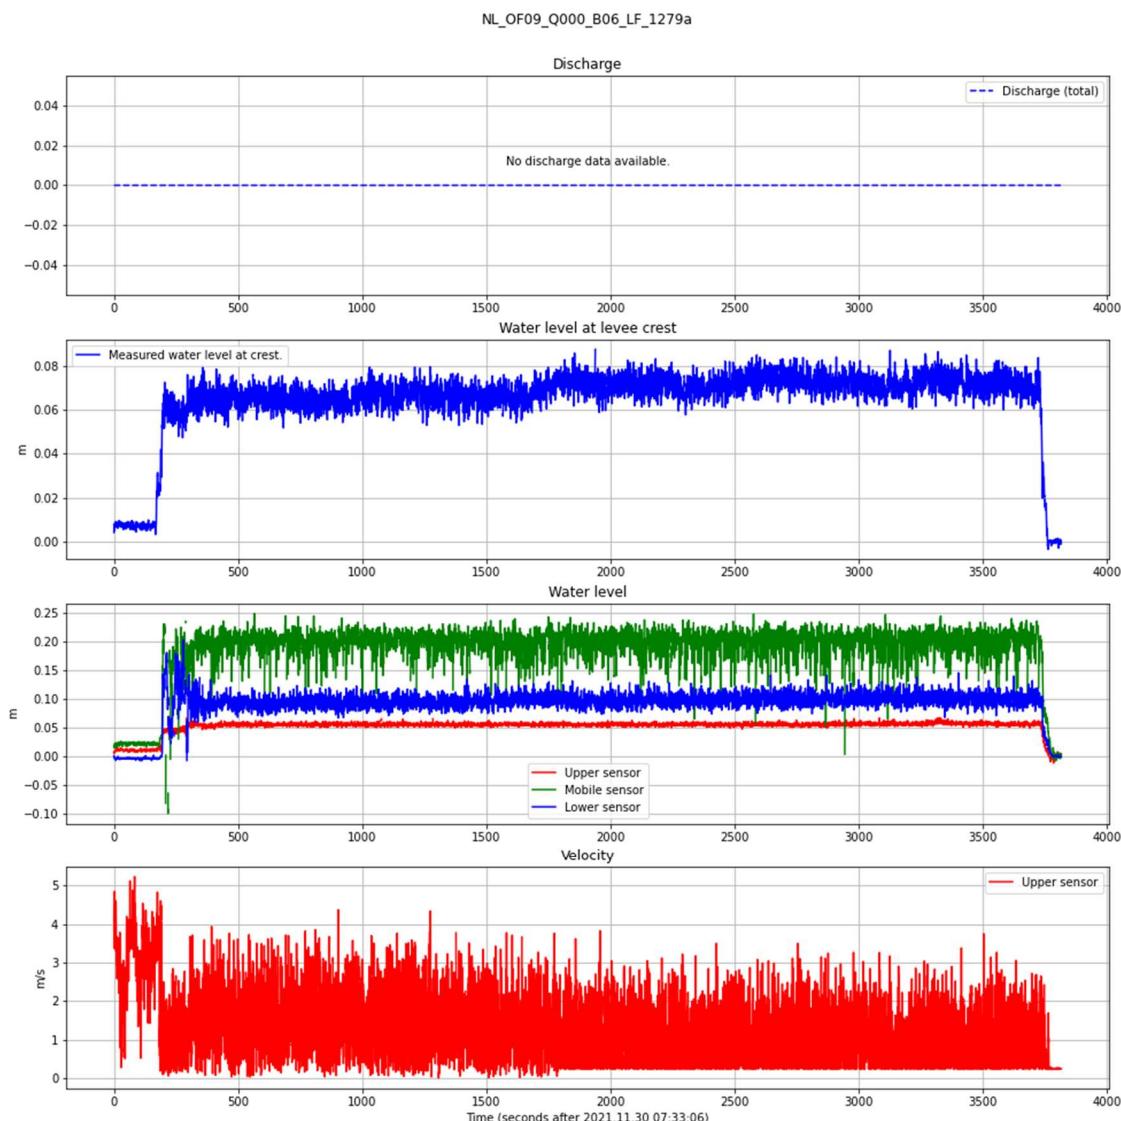

H.4 N-OF09 Block 5

Start	23/11/2020 13:14				
Stop	23/11/2020 14:14				
Duration	1 hour				
Pump and pump power	BA500				
Discharge	12 m ³ /min				
Notes	See notes block 1.				
Statistics	Statistics calculated from 227 until 3713 s (n=34858).				
series	Min	max	mean	std	Unit
DISCHARGE					m ³ /s
WH_CREST	0,058	0,100	0,079	0,006	m

VXY_MOBILE					m/s
VXY_LOWER					m/s

Annex I - N-OF10 timeseries

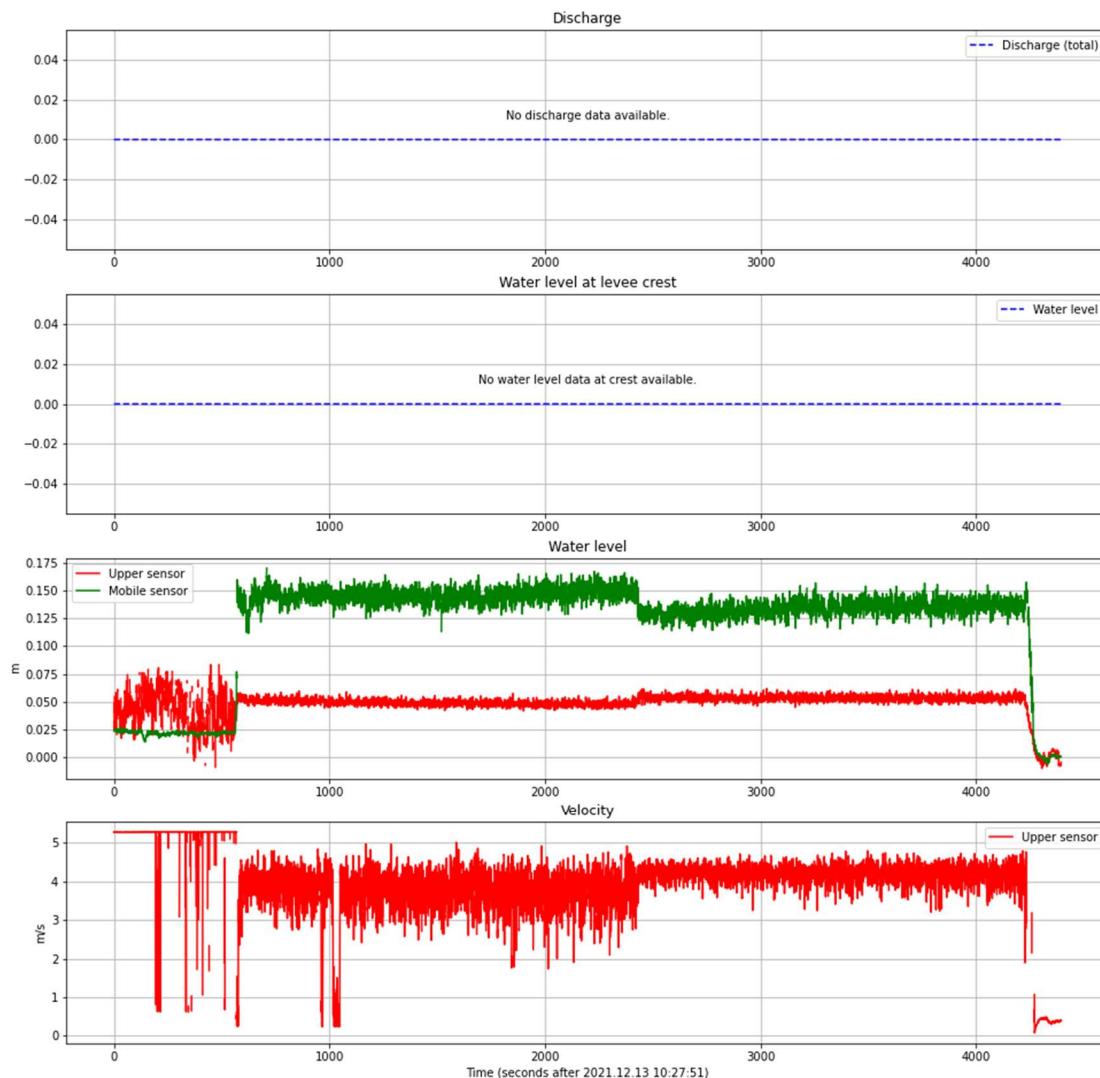

The following timeseries details are reproduced in this section:

M.1 N-OF10 Block 1 103

I.1 N-OF10 Block 1

Start	13/12 11:38 (pump was started 11:28)				
Stop	13/12 12:39				
Duration	61 minutes				
Pump and pump power	BA500, 1200 and 1300 rpm				
Discharge	1200 - 1300 rpm (ca. 470 - 560 l/s)				
Notes	Limited sensors: only WH UPPER and MOBILE at upper and middle part of levee slope VXY_UPPER at middle part of slope				
Statistics	Calculated from 579 to 4198 seconds (n=36197).				
series	min	max	mean	std	Unit
WH_UPPER	0.042	0.062	0.051	0.003	m
WH_MOBILE	0.111	0.170	0.139	0.009	m
VXY_UPPER	0.234	5.013	3.968	0.522	m/s

NL_OF10_Q_B1_LF_1371

Annex J - N-OF11 timeseries

The following timeseries details are reproduced in this section:

N.1	N-OF11 Block 1	105
-----	----------------	-----

J.1 N-OF11 Block 1

Start	13/12 13:58				
Stop	15/12 14:25				
Duration	27 minutes				
Pump and pump power	BA500, 1200 and 1300 rpm				
Discharge	1200 - 1300 rpm (ca. 470 - 560 l/s)				
Notes	Limited sensors: only WH UPPER and MOBILE at upper and middle part of levee slope VXY_UPPER at middle part of slope				
Statistics	Calculated from 181 to 1610 seconds (n=14290).				
series	min	max	mean	std	Unit
WH_UPPER	0.051	0.086	0.069	0.004	m
WH_MOBILE	0.067	0.099	0.079	0.004	m
VXY_UPPER	0.031	4.113	1.812	0.685	m/s
